Underlying Assumptions:

- Growth continues to strengthen with the initial estimate for Q3 growth coming in at 0.8%. The service sector remains the main driver of growth, boosted by a significant contribution from construction.
- The unemployment rate remained at 7.7%. The pace of decline in this measure will be dependent on a slower expansion of the workforce than the acceleration in the economy, alongside the extent of productivity.
- The CPI for September remained at 2.7%. Regulated and administered prices are likely to keep CPI above target in the near term. In the medium term inflation is expected to come back towards the target 2%.
- The principal measure in the MPC's Forward Guidance on interest rates is the Labour Force Survey (LFS) unemployment rate. The MPC intends not to raise the Bank Rate from its current level of 0.5% at least until this rate has fallen to a threshold of 7%. It currently forecasts this level to emerge in Q2/2016, but this will be updated in the November Inflation Report.
- House price inflation is likely to rise due to the government's Help to buy scheme, where it will guarantee up to 15% of purchasers' 95% mortgages. This could lead to a housing bubble, which in turn could come under pressure if rates were to rise quickly.

- Federal Reserve monetary policy expectations - the slowing in the pace of asset purchases ('tapering') and the end of further asset purchases - will remain predominant drivers of the financial markets. Recent weaker data from the US suggests that the recovery is slowing, therefore tapering looks more likely in Q1 2014.
- The US political deadlock over spending cuts and the debt ceiling is likely to reoccur in Q1 2014. The partial closedown on government in is estimated to have cost the US economy over \$24bn.
- The European backstop mechanisms have lowered the risks of catastrophic meltdown. The slightly more stable economic environment at the aggregate Eurozone level could be undone by political risks and uncertainty in Italy, Spain and Portugal (doubts over longevity of their coalitions). The ECB has discussed a third LTRO, as credit conditions remain challenging for European banks.
- China data has seen an improvement, easing markets fears.
- On-going regulatory reform and a focus on bail-in debt restructuring is likely to prolong banking sector deleveraging and maintain the corporate credit bottleneck.
- Geopolitical tensions make for a less than conducive backdrop while global economies remain fragile, especially the emerging economies.
